We are currently accepting resumes for an Electrical Designer to join an established, award-winning Electrical Engineering Firm in Daytona Beach, Florida.

The Candidate shall be thoroughly experienced in the design of power, lighting, fire detection and alarm, lightning and surge protection, grounding and bonding, security, communications, data, and associated systems for private and public sector projects ranging in size from very limited up to \$100,000,000. A strong working knowledge of the above is required.

THE CANDIDATE MUST HAVE THE FOLLOWING SKILLS:

- Shall function in the role of Designer.
- The ability to create and modify electrical plans, schedules, riser diagrams, etc.
- Capable of redesign for most efficient method of installation, retrofit and pre-fabrication purposes.
- Will be responsible for complying with engineering standards, providing project design, and working directly with other designers and the project engineer.
- Must be able to work well as an effective team member with the ability to handle multiple projects from inception to completion.
- Shall be able to work closely on an amicable and efficient basis with engineers, other designers, CAD technicians, staff and management.
- Shall be able to communicate clearly, share in, and contribute to the flow of design ideas for projects
- Shall work well with others in the engineering, review and construction process. These include but are not limited to clients, architects, engineers, review authorities, contractors, and facility planners and users.
- Shall work within the organization to help create a productive, efficient, and amicable working environment.
- Shall have the ability and experience in using the latest AutoCAD versions.
- Shall have knowledge and understanding of the NEC and other applicable codes.
- Shall be computer literate with working knowledge of Microsoft Office software and typical engineering software associated with the design process.
- Shall be knowledgeable in the review of submittals and shop drawings.
- Shall be knowledgeable in the creation and preparation of project specifications.

Interested candidates must send a resume including a listing of project experience. This listing must include project dates, project site, project value, details about the project and a listing of verifiable references.

No relocation costs paid.
